

### Key Benefits

- ✓ Cloud-based physical access control solution fully serviced
- ✓ Easy to install and maintain
- ✓ Manage the system via user-friendly web-based iVitos interface

### How do I get started?

- ✓ **1. Configuration**  
Just count the number of doors which you need to secure and register in excel or via web. Read more on our website [www.ivitos.com](http://www.ivitos.com)
- ✓ **2. Installation**  
Once you've received the hardware, you can mount it to the wall. Connect the hardware to the network.
- ✓ **3. Scan QR & Test**  
Scan the QR code printed on the hardware. Configuration of the hardware will then start automatically. The only thing left to do before you leave, is testing the system.

## Fully serviced and Cloud-based physical Access Control

### How does iVitos work?

All companies want to secure their core business. However, hardly any company would like to invest in systems that do not directly contribute to better financial results. That is why Vitani has developed iVitos. iVitos is a fully serviced, cloud-based access control solution, that allows you to offer your customer physical access control as a service. This way, your customer can benefit from excellent access control, without investing in hardware or software.

### The benefit for your customer

Your customer can manage the iVitos access control system from any location, on any webdevice and at any time, as iVitos is web-based. Your customer can easily log into iVitos from their mobile phone or tablet and e.g. remotely unlock doors when their facility needs to be accessed.

iVitos is fully scalable, as it is based on a powerful standard physical access control hardware and the intelligent software that comes with it. Your customer can therefore secure as many doors as needed. Whether the need is controlled access for only one door, or for an entire enterprise with geographically dispersed locations, iVitos will provide it with real-time access control which can easily be managed from any web-device. It is always possible to upgrade iVitos to a full Security Management system and therewith protect the initial investment. With iVitos, your customer do not only benefit from excellent access control, but also from video management and intrusion detection.
